

Calebe Apollo

Front end Developer

About me

Absolutely in love with programming, I've been studying and applying all of this for a while now, I've already made some websites, but I try every day to improve at what I do and never settle for who I am. I'm studying JS, database, Typescript, React.

Project history

Experience with Senior and other programmers

I already had the experience of participating in a project together with a Senior, it was a presentation site (like a blog), this site had other people that he called to help in the production, such as dev Juniors, Pleno and other programmers.

Apollo Insight

This site was made for a publicity company, it is a site that is already in use, and it was made in HTML5, CSS3 and JS. This is a company presentation website where you have information about the company, contacts, social networks, etc.

Habits

This is a website also made in HTML5, CSS3 and JS. On it you can record your day by ticking the boxes that are represented by emojis on a daily basis, on this site I use the browser's own database, on it you cannot log in to an account, but it is saved on the device you opened the site on.

Android mascot history

This site was made in HTML5 and CSS3. This site tells the story of the android mascot, who invented it, in what year it was released, the creators and so on. This was one of the first sites I made.

Zelda: Tears of the Kingdom

This is a presentation site for the game "Zelda tears of the Kingdom", made in HTML5, CSS3 and JS. Zelda ters of the Kingdom will be released on May 12th, so as I'm a big fan of the franchise I made this website that presents the game talking a little about it, and in it you can see the game's trailer.

Education

- Unifacema - Studying System Analysis (ADS)

Certificates

- HTML5 AND CSS3 COURSE: MODULE 1 OF 5 [40 HOURS]
- HTML5 AND CSS3 COURSE: MODULE 2 OF 5 [40 HOURS]
- HTML5 AND CSS3 COURSE: MODULE 3 OF 5 [40 HOURS]
-
